

# CS200 in-ceiling loudspeaker

- The CS200 In-Ceiling Loudspeaker is a perfect choice to use in custom distributed audio installations with our MI128 and MI254 distribution amplifiers.
- Also a great surround sound speaker to use in dedicated home theaters with any of our AV processors and multi-channel amplifiers.
- Voice matched to our WS500 and WS300 In-Wall Loudspeakers, making for a cohesive sound experience where a combination of all these speakers are used.
- A 3-way speaker that features (1) 8" woven glass fiber woofer, (2) 2" inverted Titanium dome midranges and (1) 3/4" Titanium dome tweeter.
- The midranges and tweeter are housed in a rotating array so the CS200's already incredible sonic performance can be maximized in each individual space.
- The midranges and tweeter are the same drivers used in many of our home audio speakers, meaning you'll receive the same high level performance from the CS200 as from our home audio speakers.
- The grille magnetically attaches for easy removal. The grille comes with a white finish but is paintable and will leave little to no visible edge of the mounting flange so the speaker can virtually disappear into its surroundings.
- Rough-in kit available.

Custom Audio or Home Theater Speaker
